

**WICHITA EAR CLINIC**

The Wichita Ear Clinic was established in 1892 and is a physician owned Otology, Neurotology, and Cochlear Implant Center. We are looking for an Otolologist/Neurotologist to join our practice. We provide complete state of the art otology and neurotology patient care with full audiology, vestibular, and hearing aid services. We are a busy cochlear implant center with on-site programming. Our working relationship with our neurosurgical colleagues is excellent and our physicians perform both microsurgical resection and stereotactic radiotherapy for cranial base tumors.

Wichita is currently building a 470, 000 square foot Health Sciences Center in the heart of Wichita. This Biomedical facility will combine the Wichita campuses of KU School of Medicine, KU School of Pharmacy, Wichita State University's College of Health Professions, and WSU Tech's Health Professions Program into one location. The campus is expected to be completed in 2026 and will have an estimated 3000 students and 200 faculty. This will provide additional teaching, research, and collaboration opportunities for our physicians.

Academic appointment with Kansas University School of Medicine-Wichita is available. Our practice frequently has KU-Wichita medical students and Wichita State University audiology students join us for clinical rotations. Kansas College of Osteopathic Medicine students will also join us for clinical rotations starting fall 2024.

This is an incredible opportunity to join a well-established single specialty practice. Our practice has full benefits, profit sharing/retirement plan, and excellent hours. Wichita is a safe growing city and an excellent place to raise a family. We do not have general otolaryngology call responsibilities, and our on-call hours are light. Recent graduating fellows and established practitioner inquiries are welcome. Partnership opportunity anticipated within 1-2 years.

I look forward to speaking with any interested candidates to answer questions about our practice and this opportunity.

Sincerely,

John M. Lasak, MD
